

## **Task 1**

1. Choose existing organization and suggest business challenge that could be solved by implementing Information System.
2. Should we, as a company, invest in that Information System? Why yes/not?
3. What should be done from management, organization and technology perspective to implement that Information System?
4. What business problems will the proposed solution lead to?

## **Task 2**

Create functional and nonfunctional requirements for feature(choose by yourself) that could be implemented in bank.

## **Task 3**

Read book - Overcoming IT Complexity.
